# THE SEA AND THE COAST IN THE BAY OF ROSES

## CAP DE CREUS NATURAL PARK

### Description

Roses is an essentially Mediterranean town with a notable tourist and seafaring tradition.

It lies in a unique natural setting in the northern part of the Costa Brava, less than 30 km from the frontier with France, 65 km from Girona and 160 km from Barcelona.

We'll walk to the megalithic area: and excellent view point of Roses bay and all the area. Drawing a fields ketch of the area will find out the main items: strongly tourist area and two natural parks at the surroundings. We'll fill a quality assessment tab to analyse it. After the conclusions about what is the best way to manage a human impact and protected land (strategies), we'll head off to the coastal line.

Using different equipment, we'll make a coastal environment transect. We'll work on ecosystem hypothesis; algae, animals, type of rock, etc.

*An ideal visit for know how difficult is management an area with a lot of tourism and the impact of related activities.*
